

ASHWANTH NARLAPALLY

+91-7093987628 narlappallyashwanth@gmail.com Ashwanth Ashwanth12 Hyderabad, India

EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology
Computer Science and Engineering - Data Science

Jul 2021 - Present
CGPA: 7.4 out of 10

Sree Dattha Group of Institutions
Computer Science and Engineering

Jun 2018 - Jun 2021
CGPA: 6.62 out of 10

COURSEWORK / SKILLS

- Data Structures
- Database Management System
- OOPS Concept
- Operating Systems
- Python Programming
- Web Development

PROJECTS

AutoML | Machine Learning, Streamlit

Jul 2023

- Project aims to simplify machine learning for everyone by enabling the creation of highly accurate models without the need for coding. It is user-friendly and does not require any programming knowledge.
- No Coding Required: This project prioritizes accessibility and usability by allowing users to build highly accurate machine learning models without any coding or programming knowledge.

Movie-Recommendation-System | Machine Learning, Streamlit

Jul 2023

- The "Movie Recommendation System" project focuses on implementing collaborative filtering techniques to create personalized movie recommendations based on user preferences and behaviors..
- The project utilizes a data-set of movie ratings provided by users and applies preprocessing techniques to handle missing values, normalize ratings, and remove noise, ensuring the quality and reliability of the data..

Obesity Classification | Machine Learning, Streamlit

May 2023

- The "Obesity Classification" project aims to develop a machine learning model to classify individuals into different obesity classes based on various features..
- The project utilizes a data-set that contains information about individuals, including demographic data, lifestyle factors, and physical measurements..
- Different machine learning algorithms, such as logistic regression, decision trees, and support vector machines, are explored and implemented to build the classification model..

EXPERIENCE

OASIS InfoByte
Data Science Intern

Mar 2023 - Apr 2023
Remote

- capstone projects completed during the internship. These projects cover various topics such as unemployment rate prediction, car price prediction, and iris flower classification. Each project involves data analysis, preprocessing, model training, and evaluation..
- **Dataset Utilization:** The projects make use of specific datasets relevant to their respective topics. The datasets include information on unemployment rates, car features and prices, and iris flower measurements. These datasets are utilized for training machine learning models and extracting insights..
- Machine Learning Techniques Used: Regression, Classification, and Clustering Algorithms.

TECHNICAL SKILLS

Languages: Python, C++, Html , Css , SQL, R

Developer Tools: VS Code, , IntelliJ Idea Ultimate

Technologies/Frameworks: Machine Learning, Streamlit, Web Development

CERTIFICATIONS

- Programming for Everybody (Getting Started with Python) - Coursera
- Learning Data Analytics: 1 Foundations - LinkedIn Learning
- Participated and Achieved a TCS codevita Certification in TCS CodeVita Season 10
